## INTRODUCTION

## WE ARE AN INDUSTRY LEADER

PAI Pharma is the industry leader of high-quality, reliable, US-made, *patient-centric* unit-dose medicines. We are continuously evolving and growing to offer the industry-leading full line of innovative unit-dose medications, direct contracting and supply, and dedicated customer service support. Our unwavering commitment to medication safety and ability to ensure the availability of high-quality unit-of-use medications drives development of unique and differentiated offerings.

## BROADEST PORTFOLIO OF UNIT-DOSE AND LIQUID MEDICATIONS

**Extensive Inventory  
& Safety Stock**

**Expansive Unit-Dose  
Portfolio**

**Largest Gx-liquid  
Capacity in the  
United States**

**Barcoding at Unit  
of Dose Level**

# PAI PRODUCT BARCODES

## BARCODE GUIDE

Before beginning to test your scanner for barcode reading ability, please ensure that your scanner’s hardware and software has been updated to read the GS1-128 Databar Linear and 2D Datamatrix code.

### TEST YOUR SCANNER

If your scanner does not display any numbers or fails to beep, contact your scanner supplier. Your scanner is not enabled to read the GS1-128 Databar Linear or the 2D Datamatrix barcode symbol.

Scan the images below to test your scanner:

The scanner display should show:  
**0100301210873164**

The scanner display should show:  
**0100301210873164211234567890121721063010AB12**

### NO PRODUCT FOUND!

If the scanner has been enabled to read GS1-128 Databar Linear, and the product does not appear in the database when it is scanned, contact your scanner supplier, pharmacy informatics team, or IT department to troubleshoot.

### BARCODE QUALITY

Potential packaging defects:

- Smeared
- Smudged
- Faded
- Crosses the perforation

For questions about how to purchase or any other information on products, call your PAI sales representative or contact customer service at **864-331-1832** or **info@paipharma.com**.

| THE BARCODE SYMBOLS |                |                |                |

| Case 2D             | Carton         | Bottle         | Cup            |
| GS1 Datamatrix      | GS1 Datamatrix | GS1 Datamatrix | GS1-128 Linear |

| WHAT IS A GTIN?                                                                                                                                                                                                                                    |                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| GTIN is an acronym for Global Trade Identification Number and is a 14-digit number. The GS1 assigns a prefix to a registered company which is used to create an item number. For drug products, the prefix includes the FDA-assigned labeler code: |                  |
| GS1 Prefix GS1                                                                                                                                                                                                                                     | NDC Labeler Code |
| 030121                                                                                                                                                                                                                                             | 0121             |

If your product database does not allow the storage of the 14-digit GTIN, programming will be required by your product data provider to extract the NDC or PAI ID from the GTIN. The format of the three-segmented numbers are as follows:

| 10-Digit NDC | 11-Digit NDC |
|--------------|--------------|
| 4-4-2        | 5-4-2        |

| WHAT DOES THE DATA REFERENCE?                                                                                                                                                                                     |                           |                          |                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|--------------------------|-----------------------|
| The encoded data follows GS1/HDA specifications. There are two-digit Application Identifiers (AIs) that will help GS1-128 compliant systems identify the information being read. PAI uses the following AI codes: |                           |                          |                       |
| GTIN (14-digit)                                                                                                                                                                                                   | Serial Number (12 digits) | Expiration Date (YYMMDD) | Lot Number (4 digits) |
| 01                                                                                                                                                                                                                | 21                        | 17                       | 10                    |
